

INTRODUCTION

INTRODUCTION

TubeFit Engineers are designed as leak free connection for process, power & Instrumentations applications. These two ferrule fittings are manufactured to the high test quality standards & available in a large of sizes, materials and configurations.

FEATURES

TubeFit Engineers Tube Fittings has been designed for use in instrumentations, process & control system, analyses and environment employed in chemical, petroleum, power generating, pulp & paper plants. TubeFit Engineers tube fitting has also found special application in other fields where high pressure tube fittings are required. If more specific information, including heat code traceability, is required TubeFit Engineers will provide details. Stainless steel TubeFit Engineers tube fittings work reliably on both seamless & welded - redrawn, fully, annealed type 304, 306 & 316L tubing.

MATERIALS

TubeFit Engineers Tube Fittings are available as standard in Heat Code Traceable, SS316, SS316L, SS304, Carbon Steel, Brass, Monel, Hastelloy. Straight fittings are machined from cold finished bar stock & shaped bodies are machined from high quality forging. The Row materials used fully conforming to chemical requirements as per respective material specifications.

TWO FERRULE COMPACT DESIGN

Tube fitting have been designed and manufactured with great care to meet the specifications required for wide range of applications in chemical, metro chemical, oil refinery, power generation, shipbuilding, pulp & paper, micro electronics, etc.

The double ferrule fitting consist of four parts: body, front ferrule, back ferrule & nut. This two ferrule design consists of front & back compensates for any tolerances in tube OD, wall thickness, material hardness & always secure leak proof joints capable of high pressure, vacuum & vibration applications.

Allows the front ferrule to seal while the back ferrule grips. Uses consistent geometry (instead of torque) for gauge able make-up. Overcomes variations in tube materials, wall thickness & hardness. Provides excellent vibration resistance. Allows reliable remake connections.

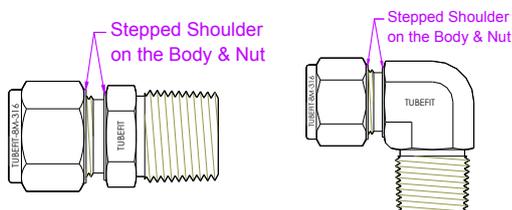

INSTALLATION

Easy to install using hand tools. No torque is transmitted to tubing during installation. Gap inspection gauge assures sufficient pull-up upon initial installation. Installation instructions are available (see page). Excellent gas-tight sealing and tube-gripping action. Reduced potential for improper pull-up. Consistent remakes. Excellent vibration fatigue resistance and tube support. Full compatibility with original stainless steel tube fittings & front ferrule of identical sizes. Easy 1.1/4-turn installation. Gauge ability on initial using gap inspection gauges.

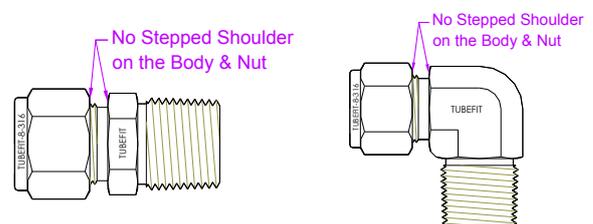

IDENTIFYING TUBE FITTINGS

All metric tube Straight fittings, such as male connectors, unions, female connectors etc. & Shaped fittings, such as elbows, crosses, & tees, have a stepped shoulder on the body & nut hex. All fraction tube Straight fittings, such as male connectors, unions, female connectors etc. & Shaped fittings, such as elbows, crosses & tees, have no stepped shoulder on the body & nut hex.

FRACTION

STANDARD MATERIALS SPECIFICATIONS

Tubefit tube fittings are available as a standard in Stainless Steel, Brass, Monel & Hastelloy. Straight fittings are machined from cold finished bar stock & forging. Specifications for fitting materials & tubing are shown below.

For special application contact CB BETTONAGLI SRL.

MATERIAL	BAR STOCK	FORGING	COMMON TUBING SPECIFICATION
Stainless Steel (Type 316)	ASTM A276 ASME SA479	ASTM A182 ASME SA182	ASTM A213 ASME SA213
Carbon Steel	ASTM A108	—	—
Brass	ASTM B16 ASTM B453	ASTM B283	ASTM B 75 ASME SB 75
Alluminium	ASTM B211	ASTM B247	—
Hastelloy c-276°	ASTM B574	ASTM B564	ASTM B622/626
Alloy 20	ASTM B473	ASTM B462	—
Alloy 400/R-405	ASTM B166 ASME SB166	ASTM B564 ASME SB564	—
Alloy 600	ASTM B166 ASME SB166	ASTM B564 ASME SB564	ASTM B 163
Titanium	ASTM B348	ASTM B381	ASTM B 338
Nylon	ASTM D4066	—	—
PTFE	ASTM D1710	ASTM D3294	—
SAF 2507	ASTM A479	ASTM A182	—

O-RINGS

O-seal fittings include a 70 durometer Buna O-ring. Other straight thread fittings with O-Rings include a 90 durometer fluorocarbon FKM O-ring. Other O-ring materials are available upon request. O-rings are coated with a thin film of silicone-based lubricant. Removal of factory applied lubricants may affect performance.

O-seal fittings are rated to 3.000 psi (206bar).

PLATING & COATING

For improved performance, fitting components receive additional processing. Fitting bodies that are subject to further processing (plating and coating) are shown.

Over 1 in. and over 25mm stainless steel fittings use stainless steel ferrules with PFA coating. Application above 450°F (232°C) **require** silver-plated front ferrules & uncoated back ferrules. To order fittings with silver-plated ferrules, add **-BM** as a suffix to the basic ordering number. All carbon steel Swagelok tube fittings are supplied with 316 stainless steel back ferrules.

PLATING & COATING

FITTING MATERIAL	BODY PROCESS
Alluminium	Anodized, hydrocarbon film
Alloy 400/R-405, Alloy 20, Alloy C-276, Alloy 600	Hydrocarbon film
Carbon steel (except weld bodies)	Zinc plating
Carbon steel (welded bodies)	Hydrocarbon film Chemical conversion coating
Titanium	Anodized, hydrocarbon film
Brass, Nylon, 316 Stainless Steel and PTFE	Not applicable

SAFETY PRECAUTIONS

- Use only long reducers in female ports.
- Never allow problems to go unreported.
- Avoid unnecessary disassembly of unused fittings.
- Do not bleed system by loosening fitting nut or fitting plug.
- Never turn fitting body. Instead, hold fitting body & turn nut.
- Always use proper thread sealants on tapered pipe threads.
- Do not make up and tighten fittings when system is pressurized.
- Use gap inspection gauge to ensure sufficient pull-up upon initial installation.
- Do not mix materials or tubing, ferrules, nuts & fittings bodies from various manufacturers.
- Make sure that the tubing rests firmly on the shoulder of the tube fitting body before tightening the nut.

TUBING CONSIDERATIONS

- Metal tubing material should be softer than fitting material. For example, stainless steel tubing should not be used with brass fittings.
- When tubing and fittings are made of the same material, tubing must be fully annealed.
- Always use an insert with extremely soft or pliable plastic tubing.
- Extremes of wall thickness should always be checked against fitting manufacturer's suggested minimum & maximum wall thickness limitation.
- Surface finish is very important to proper sealing. Tubing with any kind of depression, scratch, raised portion or other surface defect will be difficult to seal, particularly in gas service.
- Tubing that is oval & will not easily fit through fitting nuts, ferrules & bodies should never be forced into the fitting.
- Tubefit Engineers Tube Fittings can be used with a wide variety of tubing materials & a large of tube wall thickness.

INTERCHANGEABILITY

Other tube fitting manufacturers often claim that their components are interchangeable with tube fitting components. We believe that interchanging & intermixing tube fitting components of different designs, made by different manufacturers, can result in leaks & tube slippage in a percentage of cases. We also believe this practice can be dangerous in critical applications. Leak-tight seals that will withstands high pressure, vibration, vacuum & temperature changes depend upon close tolerances & consistent, exacting quality control in conjunction with good design principles. The full value we build into tube fittings is lost when components from other manufacturers are interchanged or intermixed with ours.

We believe that any manufacturer's fitting performs best when only that manufacturer's components are used in its fittings.

We do not believe that a tube fitting made up by interchanging & intermixing components of other manufacturers with genuine tube fitting components will perform to the high standards of an all tube fitting.

TUBE FITTING PRESSURE RATINGS

Tube fittings are related to the working pressure of tubing as listed in the catalog. Careful selection of high-quality tubing is important when installing safe, leak-tight systems.

NOTE: Some fittings with AN, O-seal and SAE/MS ends may have lower ratings. For more information, contact CB BETTONAGLI SRL sales or purchase representative.

PRESSURE RATING CALCULATIONS

(ref. ASME B31.3 code for process Piping)

NPT/ISO Pipe Size In.	316 SS & Carbon Steel				Brass			
	Male		Female		Male		Female	
	Psi	bar	Psi	bar	Psi	Bar	Psi	bar

1"7/8-12				
2"1/2-12				
	1813	125	1450	100

PIPE END PRESSURE RATINGS

Pressure ratings for fittings that have both tube fitting & pipe thread ends are determined by the end connection with the lowest pressure rating. The **Pipe End Pressure Ratings** chart lists pressure ratings for male and female **pipe thread ends**. For female & male pipe threads to have the same pressure rating in the same nominal pipe size, the female thread would require a heavier wall, resulting in a fitting too large & bulky to be practical.

STRESS VALUE

Allowable stress of 20.000 psi (137.800KPa) between -20°F & +100°F (-29°C & +37°C) based on a ultimate tensile strength 75.000 psi (516.000KPa). Based on minimum wall thickness & maximum O.D. allowable by ASTM A 269 for welded tubing, the following derating rate to be applied for weld integrity. (ASME B 31.3 - 1993 Edition, Table A-1B). For double welded tubing: 0,85 & single welded tubing: 0,80.

NOTE:

- All calculations are based on maximum outside diameter & minimum wall thick. Without allowance for corrosion and erosion.
- Care should be taken for for temperature rating if tubing are coated or plated.
- Figures shown are not for design purpose but for reference only and the accuracy of information here is not liability of our company.

STRESS VALUE
(Ref. ASME B31.3 Code for Process Piping)

INTRODUZIONE

INTRODUZIONE

I Tubefit Engineers sono progettati come connessioni prive di perdite per applicazioni di processo, energia e strumentazione. Questi raccordi a due ogive sono prodotti secondo gli elevati standard di qualità e sono disponibili in un'ampia gamma di dimensioni, materiali e configurazioni.

CARATTERISTICHE

I raccordi per tubi Tubefit Engineers sono stati progettati per l'uso in strumentazioni, sistemi di controllo e di processo, analisi e ambiente impiegati in impianti chimici, petroliferi, di produzione di energia, di cellulosa e carta. I raccordi per tubi Tubefit Engineers trovano applicazione anche in altri settori in cui sono richiesti raccordi per tubi ad alta pressione. Se sono necessarie informazioni più specifiche, compresa la tracciabilità del codice termico, Tubefit Engineers fornirà i dettagli. I raccordi per tubi Tubefit Engineers in acciaio inox funzionano in modo affidabile sia su tubi senza saldatura che su tubi saldati, ridisegnati, completamente ricotti, di tipo 304, 306 e 316L.

MATERIALI

I raccordi per tubi Tubefit Engineers sono disponibili come standard in acciaio con codice termico, SS316, SS316L, SS304, acciaio al carbonio, ottone, Monel, Hastelloy. I raccordi dritti sono lavorati da barre finite a freddo e i corpi sagomati sono lavorati da fucinati di alta qualità. I materiali utilizzati sono pienamente conformi ai requisiti chimici previsti dalle specifiche dei materiali.

DESIGN COMPATTO A DUE OGIVE

I raccordi a ogiva sono stati progettati e realizzati con grande cura per soddisfare le specifiche richieste per un'ampia gamma di applicazioni nei settori della chimica, della chimica metropolitana, della raffinazione del petrolio, della produzione di energia, della cantieristica navale, della cellulosa e della carta, della microelettronica, ecc.

Il raccordo a doppia ogiva è composto da quattro parti: corpo, ogiva anteriore, ogiva posteriore e dado. Il design a due ogive, anteriore e posteriore, compensa qualsiasi tolleranza nel diametro esterno del tubo, nello spessore della parete, nella durezza del materiale e garantisce sempre giunti a prova di perdite in grado di sopportare applicazioni ad alta pressione, vuoto e vibrazioni. Consente all'ogiva anteriore di sigillare mentre l'ogiva posteriore fa presa. Utilizza una geometria coerente (anziché una coppia di serraggio) per un'esecuzione a prova di calibro. Supera le variazioni dei materiali dei tubi, dello spessore delle pareti e della durezza. Offre un'eccellente resistenza alle vibrazioni. Consente connessioni affidabili per il rifacimento.

INSTALLAZIONE

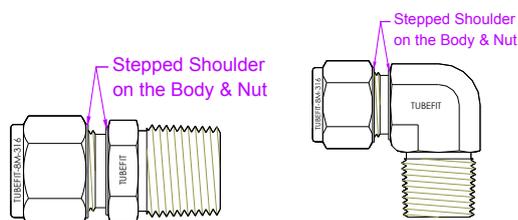

Facile da installare con attrezzi manuali. Nessuna coppia viene trasmessa al tubo durante l'installazione. L'indicatore di controllo dello spazio assicura una trazione sufficiente al momento dell'installazione iniziale. Sono disponibili istruzioni per l'installazione (vedi pagina). Eccellente tenuta di gas e azione di serraggio del tubo. Riduzione del potenziale di pull-up improprio. Rifacimenti consistenti. Eccellente resistenza alla fatica da vibrazioni e supporto del tubo. Piena compatibilità con i raccordi originali in acciaio inox e l'ogiva anteriore di dimensioni identiche. Facile installazione a 1.1/4 di giro. Capacità di misurare la distanza iniziale con i calibri di ispezione della distanza.

IDENTIFICAZIONE DEI RACCORDI

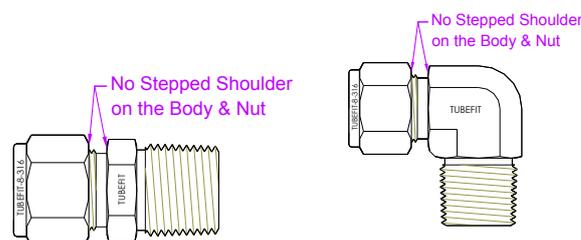

Tutti i raccordi metrici per tubi, come i connettori maschi, i raccordi, i connettori femmina ecc. e i raccordi sagomati, come i gomiti, le croci e i raccordi a T, hanno una spalla a gradini sul corpo e sul dado esagonale.

Tutti i raccordi dritti per tubi in pollici, come connettori maschi, raccordi, connettori femmina ecc. e raccordi forgiati, come gomiti, croci e tee, non hanno una spalla a gradini sul corpo e sul dado esagonale.

SPECIFICHE

I raccordi per tubi Tubefit sono disponibili come standard in acciaio inox, ottone, Monel e Hastelloy.

I raccordi dritti sono lavorati da barre e forgiati finiti a freddo. Le specifiche dei materiali dei raccordi e dei tubi sono riportate di seguito.

Per applicazioni speciali contattare CB BETTONAGLI SRL.

O-RINGS

I raccordi O-ring includono un O-ring da 70SH di durezza. Altri raccordi a filettatura dritta con O-Ring includono un O-ring in FKM fluorocarbonio da 90SH di durezza. Altri materiali per O-Ring sono disponibili su richiesta. Gli O-Ring sono rivestiti con una sottile pellicola di lubrificante a base di silicone. La rimozione dei lubrificanti applicati in fabbrica può influire sulle prestazioni.

I raccordi O-ring hanno una portata di 3.000 psi (206 bar).

GALVANIZZAZIONE E RIVESTIMENTO

Per migliorare le prestazioni, i componenti dei raccordi vengono sottoposti a ulteriori lavorazioni. Sono indicati i corpi dei raccordi sottoposti a ulteriori lavorazioni (galvanizzazione e rivestimento). I raccordi in acciaio inox da oltre 1 pollice e 25 mm utilizzano ghiera in acciaio inox con rivestimento in PFA.

Le applicazioni superiori a 450°F (232°C) richiedono ghiera anteriori argentate e ghiera posteriori non rivestite. Per ordinare i raccordi con ghiera argentate, aggiungere -BM come suffisso al numero d'ordine di base.

Tutti i raccordi per tubi Swagelok in acciaio al carbonio sono forniti con ghiera posteriori in acciaio inox 316.

GALVANIZZAZIONE E RIVESTIMENTO

Acciaio Carbonio (corpi saldati)	film di idrocarburi Rivestimento a conversione chimica
Titanio	Anodizzato, film di idrocarburi
Ottone, Nylon, acciaio inox 316 e PTFE	Non applicabile

PRECAUZIONI DI SICUREZZA

- Usare solo riduzioni lunghe nelle femmine.
- Non lasciare che i problemi non vengano segnalati.
- Evitare di smontare inutilmente i raccordi non utilizzati.
- Non spurgare il sistema allentando il dado o il tappo del raccordo.
- Non ruotare mai il corpo del raccordo. Tenere il corpo del raccordo e girare il dado.
- Utilizzare sempre sigillanti per filettature adeguati sulle filettature coniche dei tubi.
- Non recuperare e stringere i raccordi quando il sistema è in pressione.
- Usare un calibro di controllo della distanza per garantire una trazione sufficiente al momento dell'installazione iniziale.
- Non mescolare i materiali o i corpi di tubi, ghiera, dadi e raccordi di diversi produttori.
- Assicurarsi che il tubo poggi saldamente sulla spalla del corpo del raccordo prima di serrare il dado.

CONSIDERAZIONI SUI TUBI

- Il materiale del tubo metallico deve essere più morbido del materiale del raccordo. Ad esempio, i tubi in acciaio inox non dovrebbero essere utilizzati con raccordi in ottone.
- Quando i tubi e i raccordi sono dello stesso materiale, i tubi devono essere completamente ricotti.
- Utilizzare sempre un inserto con tubi di plastica estremamente morbidi o malleabili.
- Gli spessori estremi delle pareti devono essere sempre verificati in base ai limiti di spessore minimo e massimo suggeriti dal produttore dei raccordi.
- La finitura superficiale è molto importante per una corretta tenuta. I tubi con qualsiasi tipo di irregolarità, graffio, parte in rilievo o altri difetti superficiali saranno difficili da sigillare, in particolare nel settore gas.
- I tubi ovali e che non si adattano facilmente ai dadi, alle ghiere e ai corpi dei raccordi non devono mai essere forzati nel raccordo.
- I raccordi per tubi Tubefit Engineers possono essere utilizzati con un'ampia varietà di materiali per tubi e con tubi di diverso spessore.

INTERCAMBIABILITÀ

Altri produttori di raccordi per tubi affermano spesso che i loro componenti sono intercambiabili con quelli dei raccordi per tubi. Riteniamo che l'interscambio e la combinazione di componenti di raccordi per tubi di design diverso, prodotti da produttori diversi, possa causare perdite e slittamenti del tubo in una percentuale di casi. Riteniamo inoltre che questa pratica possa essere pericolosa in applicazioni critiche.

Le guarnizioni a tenuta stagna, in grado di resistere a pressioni elevate, vibrazioni, vuoto e variazioni di temperatura, dipendono da tolleranze strette e da un controllo di qualità costante e rigoroso, unitamente a principi di progettazione validi. L'intero valore dei raccordi per tubi si perde quando i componenti di altri produttori vengono scambiati o mescolati con i nostri.

Riteniamo che i raccordi di qualsiasi produttore funzionino al meglio quando vengono utilizzati solo i componenti di quel produttore.

Non crediamo che un raccordo per tubi realizzato scambiando e mescolando componenti di altri produttori con componenti originali per raccordi per tubi possa raggiungere gli elevati standard di un raccordo completo dello stesso produttore.

VALORI DI PRESSIONE DEI RACCORDI

I raccordi per tubi sono correlati alla pressione di esercizio dei tubi elencati nel catalogo. La scelta accurata di tubi di alta qualità è importante per l'installazione di sistemi sicuri e a tenuta stagna.

NOTA: Alcuni raccordi con estremità AN, O-ring e SAE/MS possono avere valori inferiori. Per ulteriori informazioni, contattare il rappresentante commerciale o l'ufficio acquisti di CB BETTONAGLI SRL.

VALORI DI PRESSIONE ALL'ESTREMITÀ DEL TUBO

I valori di pressione per i raccordi con estremità sia a tubo che a filettatura sono determinati dall'estremità con il valore di pressione più basso. La tabella dei valori di pressione delle estremità dei tubi elenca i valori di pressione per le estremità con filettatura maschio e femmina. Affinché le filettature maschio e femmina abbiano la stessa pressione nominale, la filettatura femmina richiederebbe una parete più pesante, con il risultato di un raccordo troppo grande e ingombrante per essere pratico.

VALORE DI STRESS

Sollecitazione consentita di 20.000 psi (137.800KPa) tra -20°F e +100°F (-29°C e +37°C) sulla base di un carico di rottura di 75.000 psi (516.000KPa). Sulla base dello spessore minimo della parete e del diametro esterno massimo consentiti dalla norma ASTM A 269 per i tubi saldati, deve essere applicato il seguente tasso di declassamento per l'integrità della saldatura. (ASME B 31.3 - Edizione 1993, Tabella A-1B). Per tubi saldati doppi: 0,85 e tubi saldati singoli: 0,80.

NOTE:

- Tutti i calcoli si basano sul diametro esterno massimo e sullo spessore minimo della parete. Senza tener conto della corrosione e dell'erosione.
- Se i tubi sono rivestiti o galvanizzati, occorre prestare attenzione alla temperatura nominale.
- Le figure mostrate non sono a scopo di progettazione ma solo di riferimento e l'accuratezza delle informazioni qui riportate non è responsabilità della nostra azienda.

VALORE DI STRESS**(Rif. codice ASME B31.3 per tubi di processo)**
